

## Global Health Archive

**Valuable historical research shouldn't be locked away in the basement or filling up your shelves ... bring it alive with Global Health Archive**

“Having additional access to the archive has made Global Health a truly invaluable resource”

**Jane Falconer**, Information Services Librarian, London School of Hygiene and Tropical Medicine, UK

### **what is Global Health Archive?**

During the early half of the 20th century an incredible amount of valuable scientific research on public health was published – research that is still relevant today. For over 100 years CABI scientists have captured, indexed and published printed volumes of international public health research. This valuable content has been digitized and indexed on Global Health Archive to make the past instantly accessible and bring historic research back to life.

# how Global Health Archive adds value to literature searches

## **Allow the past to build the future**

Find historic literature to discover new research opportunities and support research proposals.

## **Assess long-term trends and historic events**

Analyse rich empirical evidence from earlier scientific studies to explore emerging trends in epidemiology.

## **Learn from the past**

Avoid replicating previous research and identify relevant methods from our past peers to strengthen scientific understanding.

## why choose Global Health Archive?

### **A fully searchable digital catalogue containing 800,000 records**

Digital cataloguing of historic records allows faster and more accurate searching to help extract hard-to-find research.

### **Contains key historic scientific findings from research spanning 1910-1983**

Global Health Archive is fully compatible with existing Global Health subscriptions allowing researchers to examine records from 1910 to the present day to provide a complete global perspective of public health research.

### **Comprehensive collection to cover all aspects of public health**

Records are categorized across a range of disciplines in public health. Coverage includes:

- Public Health
- Tropical and Communicable Diseases
- Nutrition
- Parasitology
- Entomology
- Mycology

### **One-off purchase**

Once purchased you have full access to all archive records.

### **Expert indexing provides instant access**

Records are fully indexed using CAB Thesaurus to bring faster and more accurate searches across a single resource.

CABI's commitment to publishing high-quality databases, books and other information resources is driven by a mission that has scientific research and international development at its core. Every purchase or subscription helps CABI improve lives worldwide by providing information and applying scientific expertise to solve problems in agriculture and the environment.
