

Distribution Maps of Plant Diseases Index

October 2021

This is a continuation of the series which has been published in the smaller 272 x 172 mm format. New maps and revisions published during and after 1997 are issued in A4 (210 x 297 mm) size.

From 1999 the scope of this series was extended to cover plant-parasitic nematodes in addition to the fungi, bacteria and viruses causing damage to agricultural crops, horticultural crops and forest trees.

Maps are indexed by the title of the latest edition of the map. The map number is given in bold followed by the year of the latest edition. Where the name in the title has been superseded, the new name is given in parentheses following =. Synonyms, including preferred names, are cross-referenced to the latest map title and number. More synonyms can be found on individual maps. The taxonomy is checked fully when a map is updated.
