

AgPortal

Trevor Nicholls, CEO

Member Countries Regional Consultation: Americas and Caribbean
12-14 September 2018, Ottawa, Canada

AgPortal – what it is

An **agri-advisory tool** for use in the field, enabling field technicians to:

- Digitally record their observations
- Receive support in their diagnoses of pests and diseases
- Identify control methods
- Identify the correct dosage for pesticides

Market Research Feedback

- We built a website and did a pilot in Kenya
- Feedback was positive especially in relation to the diagnosis tool
- Barriers to adoption identified with SMEs:
 - Users don't have company phones
 - Users not experienced at using apps in the field
 - The go-to-market costs of reaching this new audience

Partners for further development

- CABI has decided to pause on the technical build whilst it explores the business model
- Technology providers such as FarmForce are interested in AgPortal content
- Potential in various commodity sectors sponsoring development
- Donor bids being pursued to match-fund CABI's investment that would enable an app to be built

AgPortal

An independent service giving agronomists access to scientifically proven advice and information

Farm management

Record each farm visit, any observations of any pests, and then save and share the reports

Diagnosis

A hand curated tool that supports the diagnosis of pests and diseases for a particular crop

Pesticides & Management

Advice on how to manage pests using green methods
Search our pesticides database for registered products
Identify local agro-vets using our map

Training

Training on recognising and diagnosing pests and diseases with PestSmart, CABI's new e-Learning tool

AgPortal links supply and demand for quality inputs, to help farmers increase their yield and meet market requirements.

The most likely causes for the above descriptions on CABBAGE in Kenya are shown.
Please select one or more possible causes to get further help diagnosing this problem.

Picture		Common Names	Scientific Names
		Tobacco whitefly	Bemisia tabaci

  [Ask my supervisor for help with this diagnosis.](#)

We have the following control options:

Cultural controls

Tobacco whitefly - *Bemisia tabaci*

- Water spray to reduce the population build up
- Use yellow sticky traps and water trays to monitor and reduce pest population
- Spray neem seed kernel extract 30-40g/l
- Use recommended plant spacing for the variety used
- Avoid excessive use of nitrogen fertiliser
- During dry spell practice mulching to conserve moisture
- Keep field free from residues, weeds and alternative hosts such as cotton, tomatoes, peppers
- Conserve natural enemies such as lady birds, lacewings, wasps and Parasitoids by a voiding use of broad spectrum insecticides

Biopesticide & chemical controls

Active Substances	Registered In EU	Registered In Kenya	WHO Toxicity Level	Product Name	Manufacturer	Information	Available Data	Product Label
Azadirachtin			NL	NEEMRAJ SUPER 3000	Neem India Products.	Insecticide/Nematicide to control aphids, thrips, whiteflies, DBM, bollworms and various species of nematodes in French beans, Snow peas, Roses, Cabbages, Kales, Peas.	Show Available Data	Info
