

Global Health

health for all

Global Health gives researchers, students and practitioners unparalleled access to all the world's relevant public health research and practice – providing knowledge across borders and disciplines

www.cabi.org/globalhealth

Global Health is the only specialist bibliographic, abstracting and indexing database dedicated to public health, completing the picture of international medical and health research by capturing key literature that is not covered by other databases. **Global Health** was created to ensure that key literature from all sources can be brought quickly and easily to the attention of those working in public and global health.

key features

- **Global reach:** captures international literature not covered by other databases, providing users with a truly global perspective
- **Unique:** 51% of the journals contained in Global Health are not in PubMed: around 70% are not in Medline or Embase
- **Specially selected:** literature is selected by subject specialists. Only relevant papers are included, and content is directed by an international editorial advisory board
- **Comprehensive:** the interdisciplinary database covers all aspects of public health at both international and community level, as well as a wealth of material from other biomedical and life science fields
- **Fulltext:** Global Health provides selected full-text content of journals, reports and conferences from hard-to-find sources

key facts

- Fully searchable bibliographic database, available on multiple platforms
- Contains over 3 million scientific records from 1973 to the present day
- Around 190,000 records added each year
- Information is sourced from more than 7,200 serials, books, book chapters, reports, conference proceedings, patents, theses, electronic publications and other hard-to-find resources. Embase has around 2,900 titles not in Medline, whilst Global Health has more than 5,200 not in Medline
- Covers journals from major lists, including:
 - BMA (British Medical Association)
 - Evidence-Based Practice for Public Health (Lamar Soutter Library, Massachusetts)
 - Core Public Health Journals Project (US Medical Library Association)
 - World Public Health Association
- Supports sustainable public health practice
- Supports evidence-based practice and systematic reviews
- Supports core competencies
- Publications from over 100 countries in over 50 languages are abstracted; 96% of records have an English abstract, 16% are from non-English language sources and 28% are focussed on developing countries
- Controlled vocabulary indexing to improve retrieval
- Over 86,000 full text articles

coverage

Public health

Community health
Ethics
Evidence-based medicine
Health inequalities, social medicine and behaviour
Healthy ageing
Implementation and practice
Maternal, child and adolescent health
One Health
Public health genomics
Refugee, migrant and indigenous health
Rural health
Sexual and reproductive health
Tobacco control
Urbanisation
Women's health

Health promotion and Wellness

Community health programmes
Disease and injury prevention
Health communication, incl. social media

Tropical and international health

International health
Neglected tropical diseases
Traditional medicine
Travel medicine
Tropical medicine
Tropical public health

Public health emergencies and preparedness

Bioterrorism
Disasters, crises and conflicts
Mass migration

Epidemiology and biostatistics

Biostatistics
Epidemiology

Environmental and occupational health

Environmental health, pollution and climate change
Food fraud, safety and hygiene
Occupational health
Sanitation and water supply

Nutrition

Clinical nutrition
Food security
Public health nutrition and healthy eating
Nutritional physiology and biochemistry

Infectious and vector-borne diseases and parasitology

Bacterial and viral diseases
Fungal and parasitic diseases
Medical entomology and mycology
Nosocomial diseases
Vaccination and drug resistance
Zoonotic disease and veterinary public health

Diagnosis and therapy of disease

Infectious, parasitic and chronic diseases
Nutritional therapy and phytotherapy

Health systems

Health economics
Health policy, planning and impact assessment
Health services and surveillance

Chronic diseases and injuries

Epidemiology of cancer, heart disease and other chronic diseases
Diet influences on chronic diseases
Management of chronic disease in resource poor settings
Mental health
Prevention of chronic disease
Risk factors for chronic diseases
Screening programmes

Biomedical life sciences

Food science
Medical microbiology
Pharmacology and toxicology

“Global Health is a great resource that complements MEDLINE and brings a needed international perspective.”

Matt Wilcox, Edward and Barbara Netter Library, Quinnipiac University, USA

“I have used Global Health to teach information skills to public health PhD students from a number of African countries who benefit from its coverage.”

John Evers, Information Specialist, trainer & adviser.
Formerly Librarian (London School of Hygiene & Tropical Medicine), UK

accessing Global Health

Global Health is available on a variety of platforms and through a variety of hosts, to ensure our content is delivered in a format that meets your needs.
