

CABI Database Subject Codes

The CAB Abstracts and Global Health databases are subdivided into a number of database subsets, many of which correspond to the original, subject specific, abstract journals, which are derived from the two databases. Both databases also contain records that reference, and link to, full text articles found in other CABI services, including CAB Abstracts Plus, a suit of five full text databases, and the CABI electronic books. All the database records are coded to reflect the database subset or subsets in which they appear or the full text product in which the full text article appears. As such, the codes can be used, during a database search both as a means of subject searching, to limit a search to a specific area or areas, or as a means of limiting the search to a specific CABI full text service. Using the codes can improve search efficiency and save time. The following table lists all currently available codes.
