Farmers' crops are increasingly at the mercy of climate change, pests and diseases. PlantwisePlus will work to help countries predict, prepare for and prevent potential threats and reduce crop losses. We will provide a rural extension service to help farmers better understand and manage risks and comprehensive support to countries and farmers so they meet the increasing demand for quality food and nutrition. We will also support countries to predict and prevent plant health threats in a changing climate, reducing crop losses and increasing farmers' income, food security and food safety. We will also support countries to ensure that a full range of evidence is captured, as well as a mix of formal and informal evaluation approaches, for international partners to help them learn, improve and adapt their own policies and practices. We will also support countries to ensure that a full range of evidence is captured, as well as a mix of formal and informal evaluation approaches, for international partners to help them learn, improve and adapt their own policies and practices.
