PARTHENIUM IS DANGEROUS!

Parthenium invades crops and has been known to cause up to 40% losses. Parthenium causes health problems like Asthma, Bronchitis, Dermatitis, eye irritation and Rhinitis. Parthenium is poisonous to your livestock. It taints their milk and meat.

CONTROL PARTHENIUM

Don’t spread Parthenium
• Plant certified seed
• Wash machinery, vehicles and tools before and after using in the field
• Don’t pack fruit and vegetables with Parthenium or give to livestock during transportation
• Don’t buy flower bouquets which contain Parthenium flowers

Check your land
• Check weekly for Parthenium plants. Control the plants when they are small, before they disperse their seeds
• Be vigilant after rain as it will increase Parthenium growth
• Act as soon as you find Parthenium on your land

Control Parthenium
• Wear protective clothing
• ‘Root it out’ by pulling it up or hoeing.
• Bury uprooted plants to avoid spreading their seeds
• For larger areas of Parthenium consider using herbicides:
  • Ametryn and Atrazine
  • Atrazine+S-Metolachlor
